Food & Agriculture

WORLD RECOGNISED
ACCREDITATION

NATA Accredited for Chemistry, Microbiological and Residue Testing

The development and on-going quality assurance of agricultural and veterinary chemicals can be a minefield of compliance, validation and regulations. Symbio Laboratories has extensive experience in the analysis and validation of veterinary and agricultural chemicals. We employ both chemists and agricultural scientists that understand the requirements of this market.

Licensed with the APVMA, Symbio Laboratories is the preferred testing partner for the verification of concentrations for a range of veterinary and agricultural chemicals. APVMA registration requirements often necessitate an independent verification of certificates of analysis or best before dates – both of which can be completed within our laboratories.

Our customers take advantage of the comprehensive range of tests offered by Symbio Laboratories and rely on the extensive experience of our technical and customer service staff to ensure compliance with the regulatory and quality assurance demands of the agricultural, veterinary and livestock markets.

In recognition of the fast-moving nature of this market, Symbio Laboratories can offer accelerated testing options on many of the tests within the chemistry and residue laboratories – a service valued by existing customers facing tight production deadlines and distribution demands.

Our Areas Of Expertise Includes

Chemistry

- Pesticides
- Vitamins
- Heavy metals
- Antibiotics and Ionophores
- Anthelmintics
- Preparation of documents for APVMA registration

Microbiological

- Shelf life testing
- Stability studies

We also assist with the preparation of registration data for submission to registration authorities (such as the APVMA).

This can include method development and validation, proof of stability and shelf life.
